5G and Fibre

A game changer, where wireless can no longer exist without wireline

Objectives of our FCGA Study

Convergence
Between
Fibre for 5G
and FTTH

Range of Savings

Urban vs Rural

Impact of Assumptions

Timing aspects

36 Scenarios

Today: focus on 9 scenarios

3 Areas

Urban

High Dense

- 4k Buildings
- 30k Homes
- 24k inh/km²
- Lots of “Visitors”

Suburban

Medium Dense

- 5,7k Buildings
- 5,7k Homes
- 3,5k inh/km²

Low Dense

- 7,1k Buildings
- 7,1k Homes
- 95 inhabitants/km²

Cell Density – Example on City Centre

Cell Density – Stage 1: 5G from Macro Sites (3,5 Ghz)

Cell Density – Stage 2: 5G Small Cells (3,5 Ghz)

Cell Density

Cell Density – Stage 3: 5G Hotspots (26Ghz)

Cell Density – Stage 4: 5G Small Cells (26Ghz – 50% coverage)

Cell Density – Stage 5: 5G Small Cells (26GHz – 95% coverage)

Cell Density – Stage 5: 5G Small Cells (26Ghz – 95% coverage)

Cell Density – FTT-5G

Low Density (30)

High Density (117)

Convergence

- Fiber cable
- Homes on FTTH
- ▲ 5G Small Cells

Source: Comsof (Comsof Fiber)

Costs

INCLUDED

- OSP Fiber Network
 - Trenching
 - Ducts
 - Cables
 - Closures
 - Poles
- ISP Central Office
 - ODF
 - Racks

EXCLUDED

- Fiber Active Equipment
- 5G Active Equipment
- 5G Site Acquisition
- 5G Spectrum

RESULTS

Example result (conceptual)

$$\frac{\text{Value of convergence}}{\text{Cost FTT5G}} = \text{Percentage of the FTT5G cost that could be saved through convergence}$$
$$\frac{\text{Extra FTTH investment to be 5G ready}}{\text{Cost FTTH}} = \text{Extra Investment on top of FTTH to make it 5G ready}$$

% of FTT5G network cost that can be saved through convergence?

Respond at PollEv.com/ftth19

% extra investment on FTTH for 5G-ready?

i Poll is full and no longer accepting responses

Results

	High Dense Cells	Medium Dense Cells	Low Dense Cells
High Dense Area	74% -- 5,6%	75% -- 3,8%	96% -- 0,4%
Medium Dense Area	75% -- 7,2%	83% -- 3,2%	93% -- 0,8%
Low Dense Area	65% -- 6,6%	81% -- 2,7%	85% -- 1,9%

% of FTT5G saved by convergence -- % of extra investment to make FTTH 5G-ready

**Between 65% and 96%
of Fibre costs for 5G xHaul
can be eliminated
by rolling out an optimised
and future proof
converged fibre network**

**In some cases the cost for fibre to 5G
can be virtually eliminated**

**which can potentially decrease the total
cost of 5G by order of 50%**

**The extra investment needed to
immediately make an FTTH network ready
for 5G (even for high density of cells)
is only 1% to 7%**

A risk worth taking?

Thank you!

Questions?

This study was realized with valuable contributions from all FTTH Council organisations worldwide.

Specials thanks to the core group including

Erzsebet Fitori, Joël Mau, Tony Shortall, Comsof (Raf Meersman, Kevin Wynne, Jonas Verstuyft),
Commscope (Vincent Garnier, Pedro Torres), Corning (Mike Knott, Vanesa Diaz), Rala (Tobias Ahl, Karin Ahl),
Open Fiber (Luigi Gambardella, Edoardo Fagiolini)

Special thanks to Siradel and Prof I. Tomkos (AIT)
for their valuable contribution on 5G assumptions and technologies.

Thank you for your attention!
Stay tuned for more details about the study via
www.ftthcouncil.eu
